

经济学教材系列

撰写教材综述：在多年教学与科研实践中，笔者传授给学生简化而统一的理论架构，用以分析真实世界经济现象和优化决策。由于大多数课本欠缺这种理念及与时俱进的素材，笔者一直致力编写（修订）基础教材和习题库。在培养学生批判性思维与应用分析技能方面，笔者设计并指导学生基于理论展开实际课题研究项目。为了帮助学生节省高昂的教材费用，笔者放弃了版权费并将电子文档完全开放于互联网。

Published Projects 教材出版情况

2020 Foundations of Economic Analysis and Explanation, Cognella, CA, USA

经济分析与解释基础（2022 年已修订至第四版）

This text follows the classical themes of Adam Smith on the Wealth of Nations—trade and value. The lectures highlight the economic ways of thinking (opportunity cost) and apply the key principles to a wide range of real-world phenomena: Part I analyzes society and individuals—how society functions and individuals choose. Part II examines business and government—their decisions and policy effects. The final lecture reveals the nature of the market and its limitations. Abundant in vivid examples, short videos, rigorous research findings, quantitative applications, and classical economic thought.

2020 International Finance Lectures: Global Economy and Monetary System, Cognella, CA, USA

国际金融讲义：全球经济与货币体系（2021 年已修订至第三版）

International Finance is the most challenging course I have ever taken and taught due to the complexity of its scope and difficulty in its foundations. To bridge the enormous gap between data and theory, this text sketches a big picture of the global economy and monetary system, reviews the theoretical foundations of economics and finance, and then introduces specific topics (analyzes countries' balance of payments and external wealth positions, studies foreign exchange markets and exchange rate determination, models open economy policy challenges and currency crises, and characterizes international monetary system and the evolution of Euro). Enlivened by state-of-the-art data visualization, examples and case studies, step-by-step model analyses, and hands-on projects.

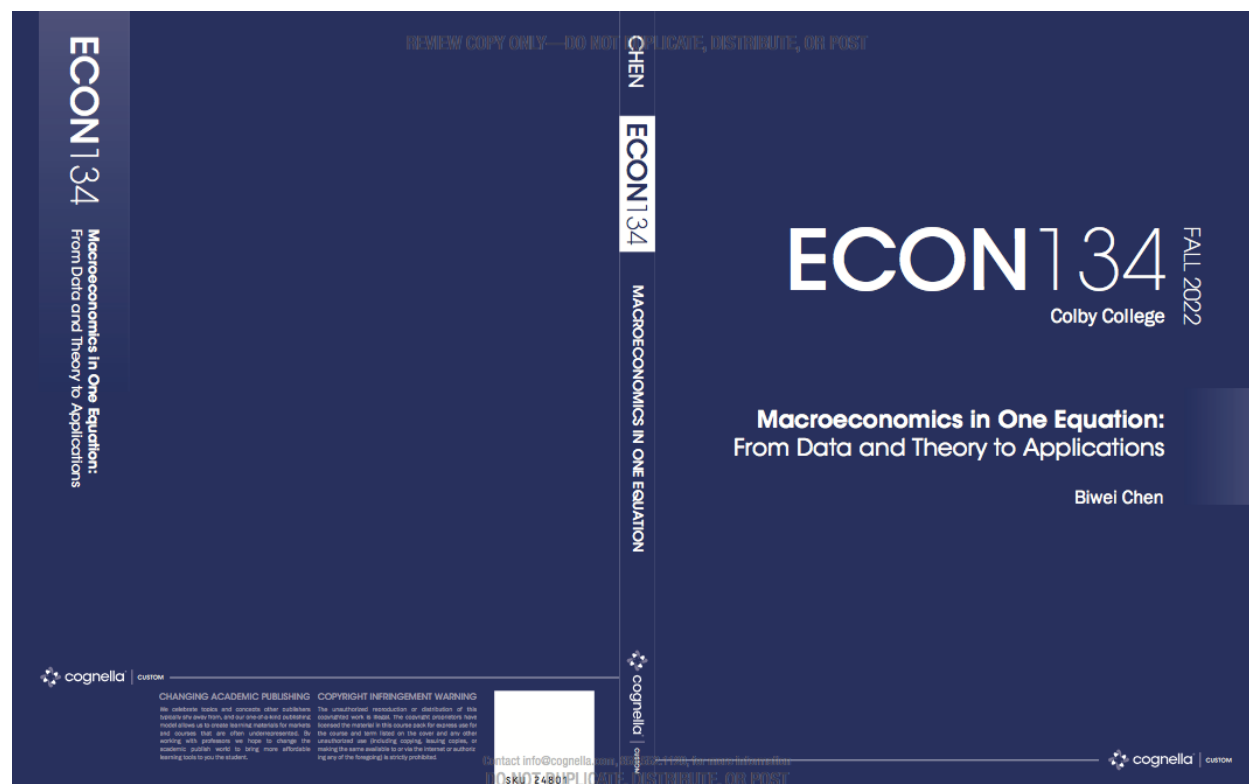

2022 Macroeconomics in One Equation: From Data and Theory to Applications, Cognella, CA, USA

宏观经济学方程式：从数据和理论到应用（2022 年 9 月出版）

To help students better understand the macroeconomic system and develop the right intuition behind complex macro variables and measurements, this textbook navigates macroeconomic topics along the lines of quantity equation of money ($MV=PY$), teaches students how to read and interpret headline macroeconomic and financial market data, informs macroeconomic policy decision logic, and provides students with quality assignments and hands-on research projects. This project is based on the courses offered at The City University of New York, Yeshiva University, Barnard College of Columbia University, Colby College, and Houghton College.

REVIEW COPY ONLY—DO NOT DUPLICATE, DISTRIBUTE, OR POST

Contents

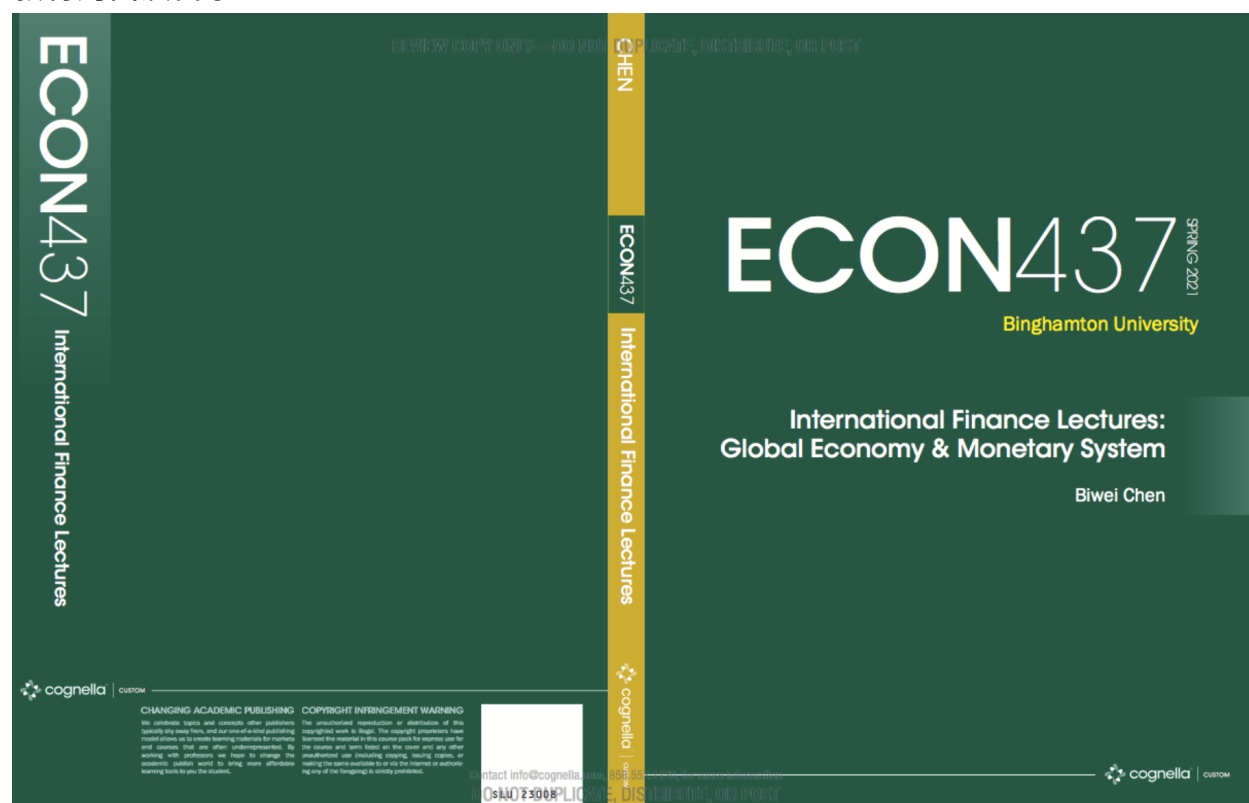

Lecture 1 The Nature and Scope of Economics	1
Lecture 2 Scientific Methodology in Economics	21
Lecture 3 Scarcity, Competition and Social Rules	43
Lecture 4 The Opportunity Cost and Applications	61
Lecture 5 World Trade Facts and Classical Theories	77
Lecture 6 Theory of Value and Market Exchange	95
Lecture 7 Utility and Preference	109
Lecture 8 Utility Maximization	125
Lecture 9 Utility and Demand	141
Lecture 10 First Law of Demand	157
Lecture 11 Second Law of Demand	171
Lecture 12 Production Theory: Output	185
Lecture 13 Production Theory: Tech	197
Lecture 14 Production Theory: Cost	223
Lecture 15 Production Theory: Profit	239
Lecture 16 Market Structure and Firm's Decision	253
Lecture 17 Market Equilibrium and Welfare	275
Lecture 18 Market for Production Factors	301
Lecture 19 Market Intervention Policies	323
Lecture 20 Market Efficiency and Failure	347
Lecture Notes and Summaries	365

Assignments

Quizzes	389
Recitations	415
Problem Sets	439
Exam Practice	453
Research Projects	475
Reasoning Questions	479

The Oxford Declaration on Christian Faith and Economics (1990) 483
